Phone number: (+389) 75248921 **Email address:** burakismail658@gmail.com

Home: Skopje (North Macedonia)

EDUCATION AND TRAINING

Bachelor of Science in Software Engineering and Information Technologies

Faculty of Computer Science and Engineering, "Ss. Cyril and Methodius" University [01/10/2023 – Current]

City: Skopje | **Country:** North Macedonia | **Field(s) of study:** Software Engineering and Information Systems

Diploma for passing state exam

International Maarif Schools [02/09/2019 – 01/06/2023]

City: Tetovo | **Country:** North Macedonia | **Thesis:** Web scraping and Extracting Website Data with Python Programming Language

WORK EXPERIENCE

Burma M – Skopje, North Macedonia

Manufacturing

[01/06/2022 – Current]

Manufacturing

- Lathe and Milling Machine Operation
- CNC Machine Operation
- Customer Service

SKILLS

communication / Python (computer programming) / ▪ Arduino & Raspberry Pi / building automation / C++ / HTML 5: HTML/CSS/JQuery / Javascript (React.js) / Web based Communication and Research / Video Editors (Video maker) / graphic design / UI/ UX / sales and customer service / guarantee customer satisfaction / handle customer complaints / customer service / embedded systems / work independently / database development tools / Programming of Microcontrollers (Arduino, ESP8266) / Intermediate knowledge of MCU programming (Arduino, ESP32)

PROJECTS

[24/04/2026 – 27/04/2026]

Cassini Hackathon Project — Water Pollution Detection Platform Blutr – Environmental Intelligence Platform (Cassini Hackathon)
Designed a platform that leverages satellite data, AI, and community reporting to monitor and predict water pollution through real-time tracking and interactive mapping.

[17/10/2026 – 17/10/2026]

Base42 Hacktoberfest - GLAS I had the opportunity to participate in Base42's Hacktoberfest, where I developed GLAS (ГЛАС), an iOS application designed to improve personal safety and address the issue of harassment and violence against women in North Macedonia. GLAS aims to create a safer community by providing an SOS emergency feature, an interactive map displaying reported incidents, nearby police station locations, and a platform for sharing safety alerts. The goal is to use technology to raise awareness, encourage community involvement, and make access to help easier during emergencies. Participating in Hacktoberfest was a valuable experience that allowed me to put my development skills into practice, work on a real-world social challenge, and turn an idea into a functional

application prototype. It was a great opportunity to learn, innovate, and connect with people who share a passion for technology and meaningful solutions.

[22/09/2026 – 25/09/2026]

EasyFinanceMK - Website Developed and deployed a responsive web platform designed to streamline personal financial management, budgeting, and expense tracking for localized users.
Built interactive dashboards and data visualization components using modern web technologies to simplify income versus expenditure analytics.
Engineered backend APIs and data models to process transactions, calculate recurring budget goals, and deliver real-time financial summaries.
Designed a clean, intuitive UI/UX tailored to enhance accessibility and user engagement across desktop and mobile

Link: https://github.com/burx00/EasyFinanceMK-Website

[14/09/2026 – 16/09/2026]

Personal Portfolio Website Personal Portfolio Website
Designed and developed a responsive personal portfolio website to showcase my software engineering projects, technical skills, experience, and creative work. Built with **React** and modern web technologies, featuring a clean, minimalistic interface with interactive animations and dynamic UI components. The website serves as both a professional portfolio and a demonstration of my frontend development, UI/UX, and web development skills.
Technologies: React, JavaScript, HTML, CSS, Responsive Design, UI/UX

[10/06/2026 – 18/06/2026]

AI Assistant - Arduino/ESP32 Project
An intelligent **AI-powered assistant robot** that provides personalized support through voice interaction, emotional expression, memory-based reminders, environmental awareness, and real-time assistance in a compact wearable or desktop form.

[07/09/2026 – 07/09/2026]

Cyberdeck - ESP32 Developed a custom portable cyberdeck integrating an ESP32, OLED display, joystick, and hardware controls. Built and tested interactive features involving Wi-Fi communication, GPIO management, user input, and OLED-based interfaces, strengthening practical skills in embedded systems and hardware-software integration.

[03/08/2026 – 03/08/2026]

Smartplant - ESP32 Developed an Arduino-based plant monitoring system using environmental sensors and an OLED display to monitor soil conditions in real time. Designed an interactive dashboard to present plant status and implemented sensor-based monitoring logic, gaining practical experience in embedded programming, sensor integration, and real-time data visualization.

[05/07/2026 – 16/07/2026]

Ultrasonic Radar - ESP32 Developed an Arduino-based radar system using an HC-SR04 ultrasonic sensor and SG90 servo motor to detect and track objects across a 180° field of view. Implemented real-time distance measurement and serial communication with a computer for visualizing detected objects, gaining practical experience in sensor integration, motor control, and real-time data processing.
